

RHESSI data vs. data simultaneously obtained with the other HXR instruments

Kashapova L.K.
(Institute of Solar-Terrestrial Physics, Irkutsk)

18 August 2002 solar flare

Importance 2.3 M/1F

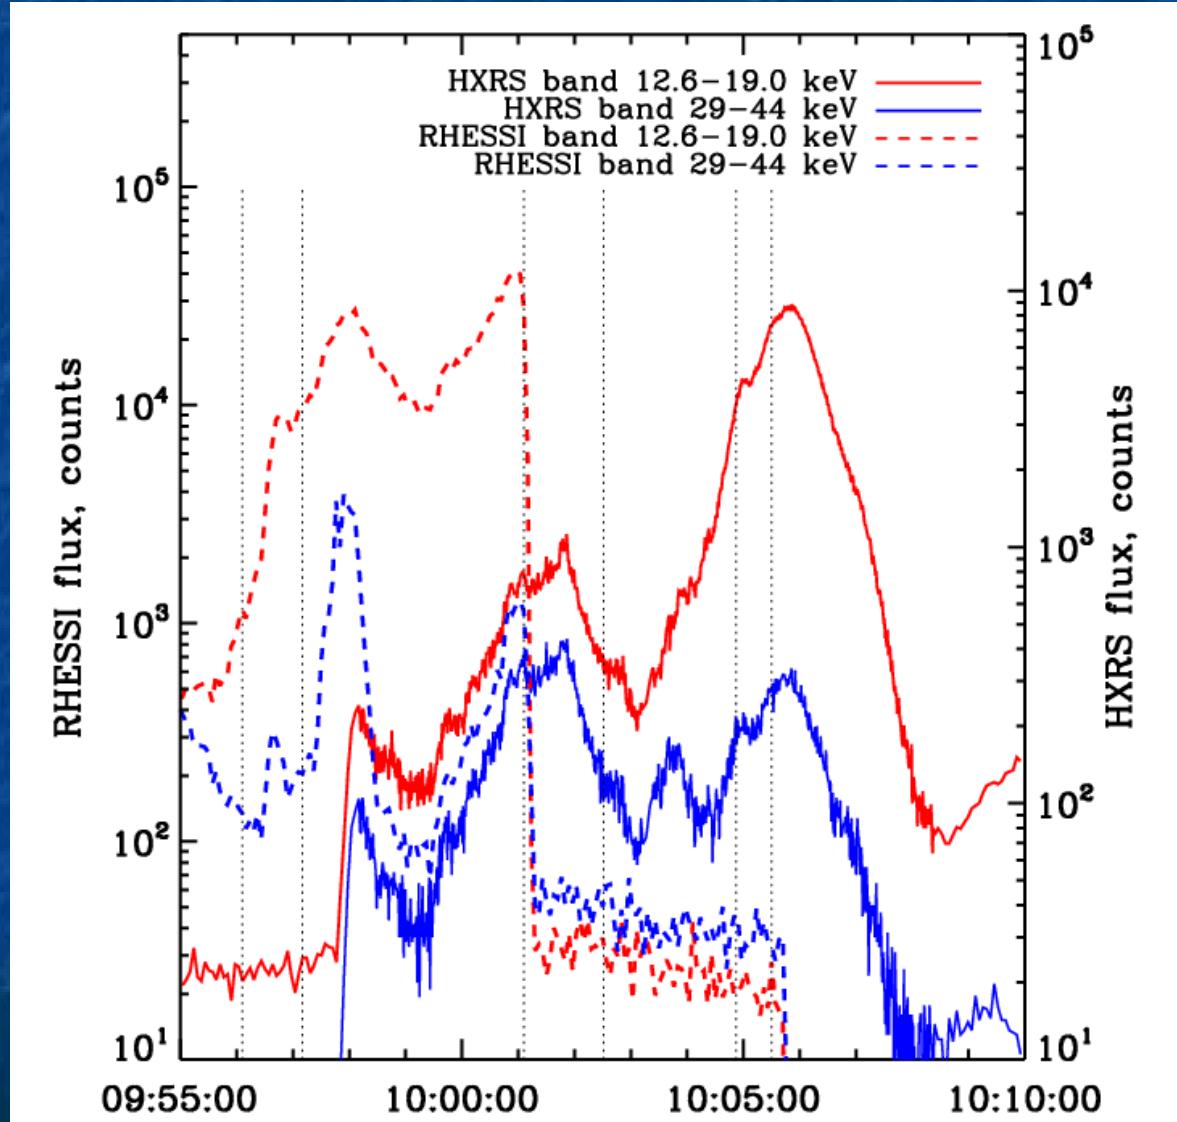

18 August 2002 solar flare

Instrument : Czech-made Hard X-Ray Spectrometer (HXRS) (on board the U.S. Department of Energy Multispectral Thermal Imager (MTI) satellite).

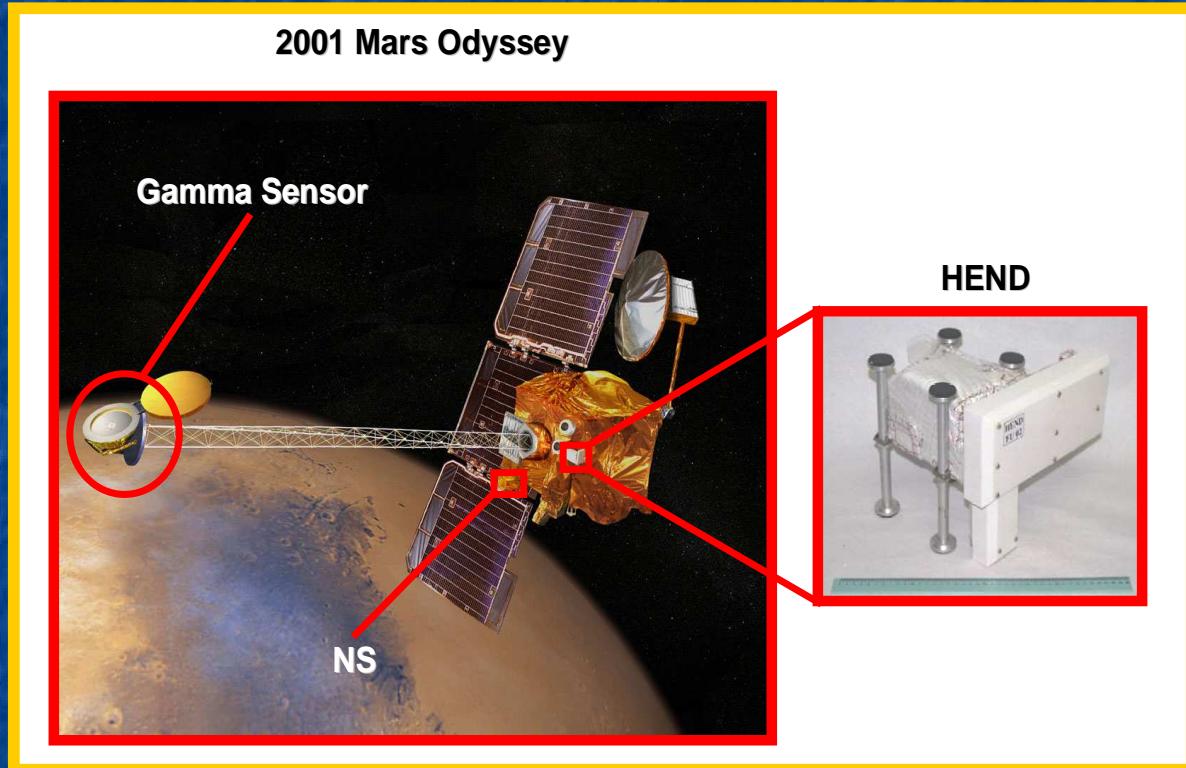

In operation March 2000 - January 2003
Farník, F., Garcia, H. and Karlický, M.: Solar Physics, 201, 357–372, 2001.

18 August 2002 event

HEND (Mars-Ulysses 2001)

Instrument :
Russian-made High Energy Neutron Detector (HEND) developed in Space Research Institute RAS.

The leader of Russian-American cooperative scientific group Dr. I. Mitrofanov

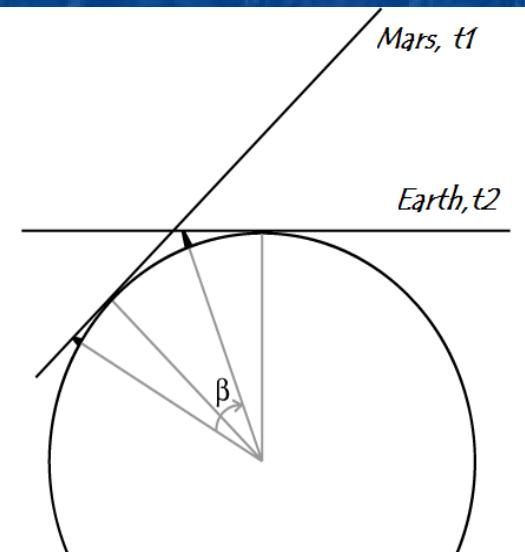

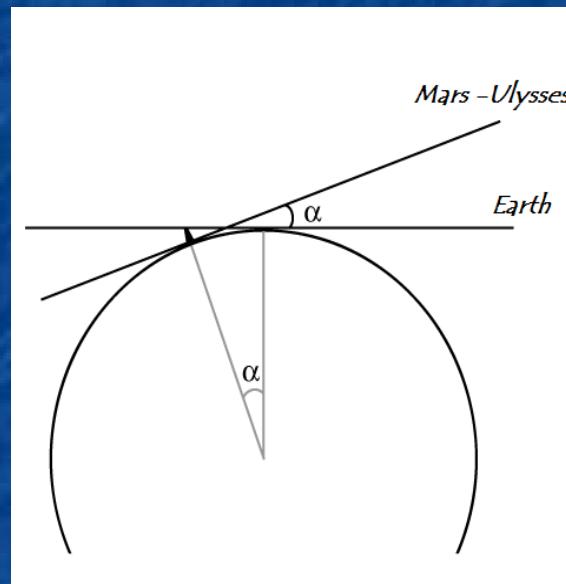

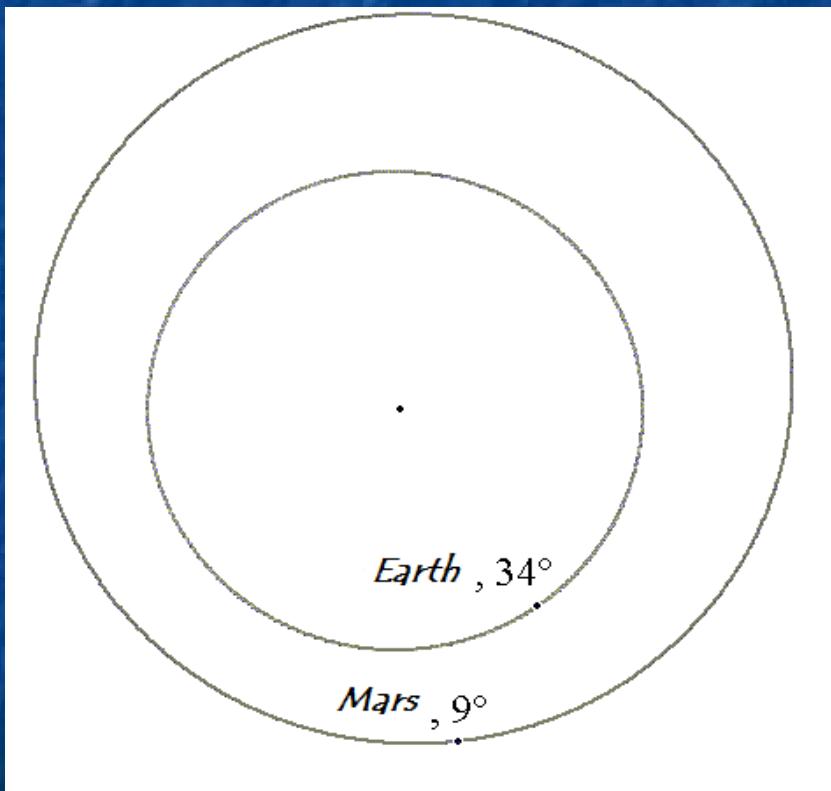

HEND (Mars-Ulysses 2001) :

main characteristics

- Mars-Ulysses was launched in April 2001
- Two detectors
- Energy range: photons from 30keV to 2,5MeV
- Temporal resolution: 0.25 second (over 80keV); 1 second (over 330 keV), 16 seconds (for spectra)
- Web- adress:
<http://www.iki.rssi.ru/hend/index-engl.htm>

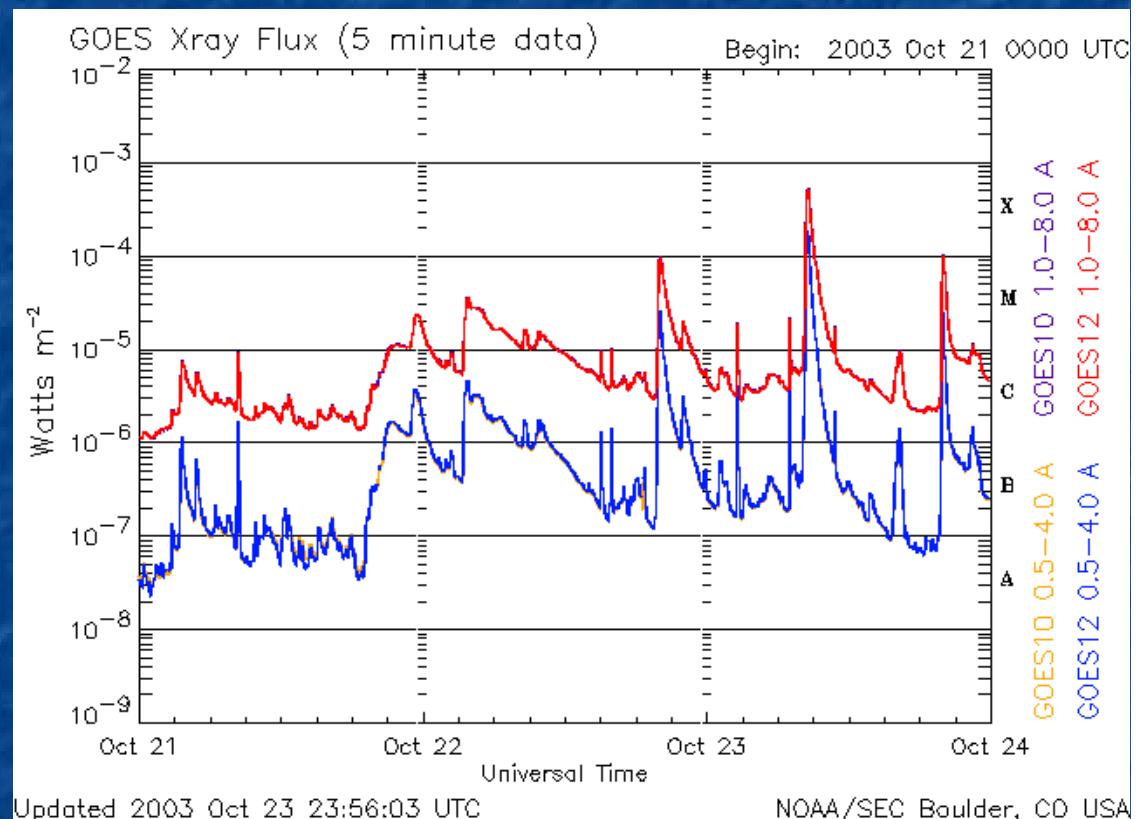

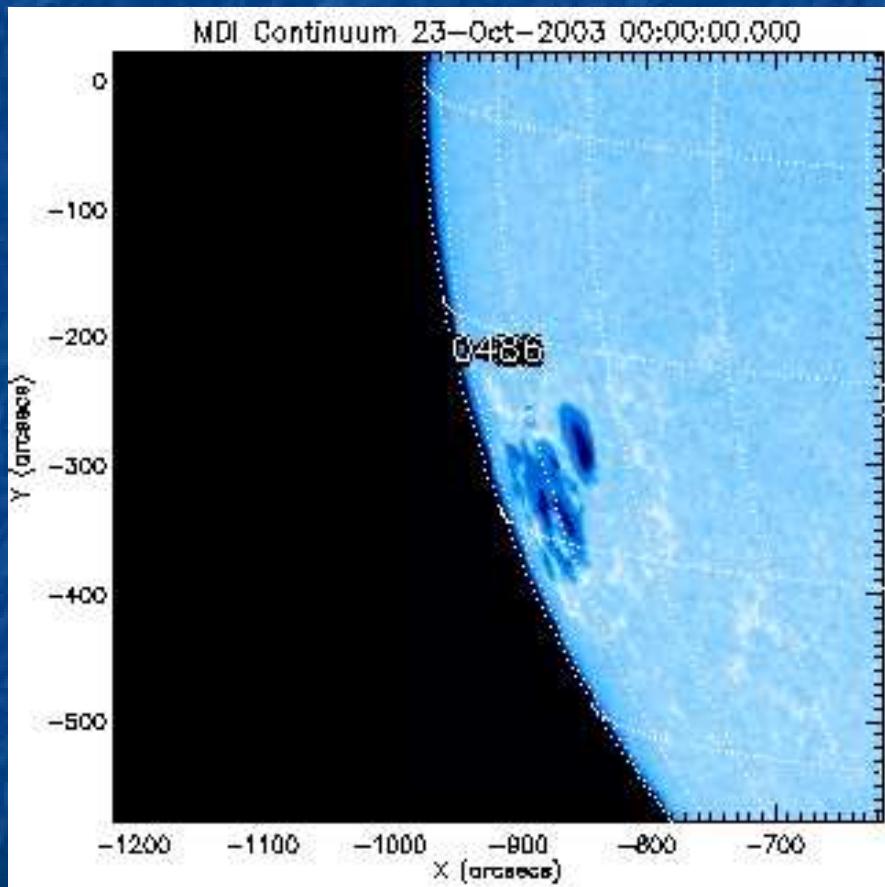

HEND (Mars-Ulysses 2001) : stereo effect.

26.10.2003

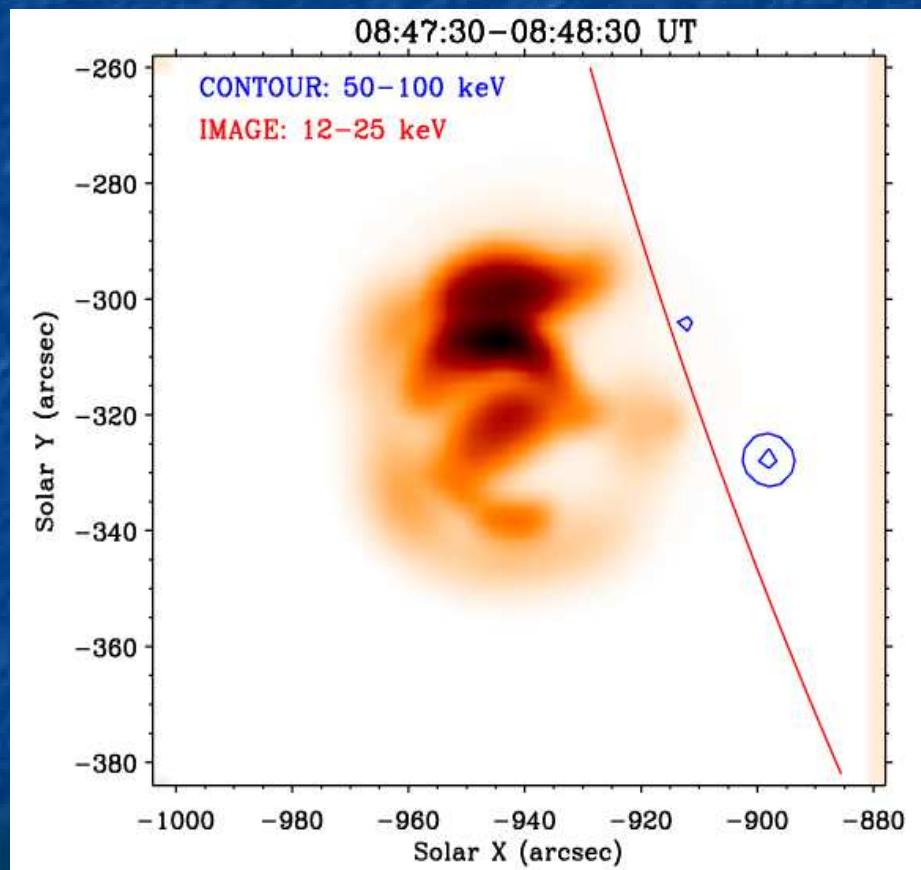

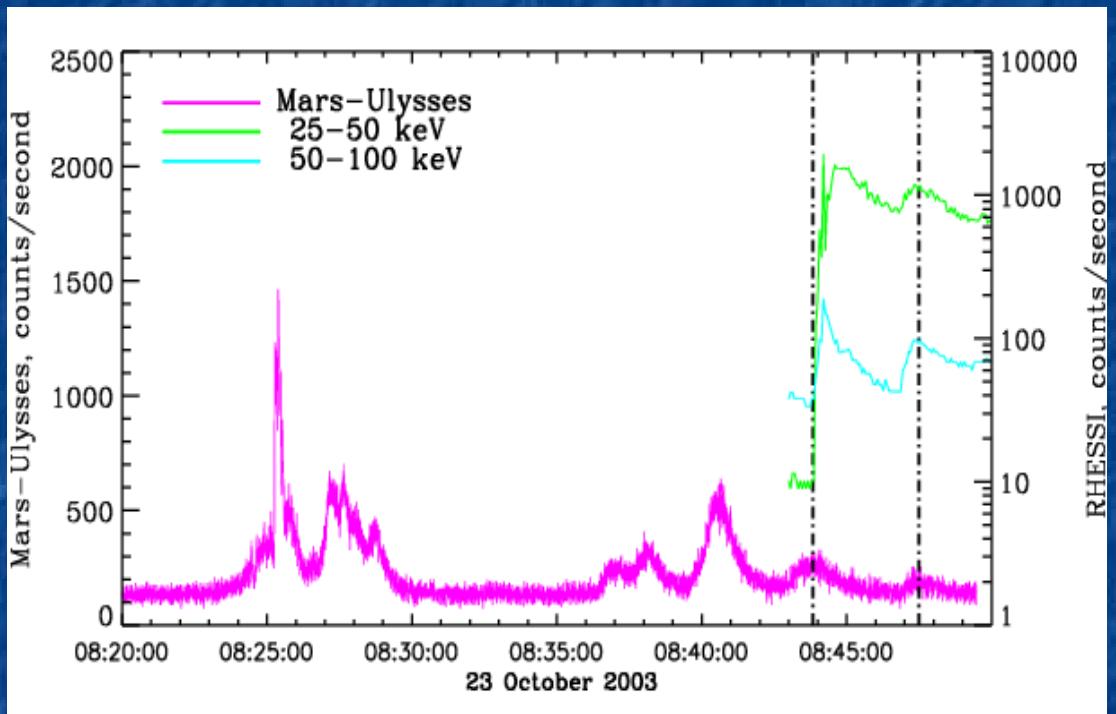

See ditelas in :Livshits M.A. Chernetsky V.A.,
Mitrofanov I.G. et. all Astronomy Reports, 2005

October 2003 solar activity

23 October 2003 solar flare

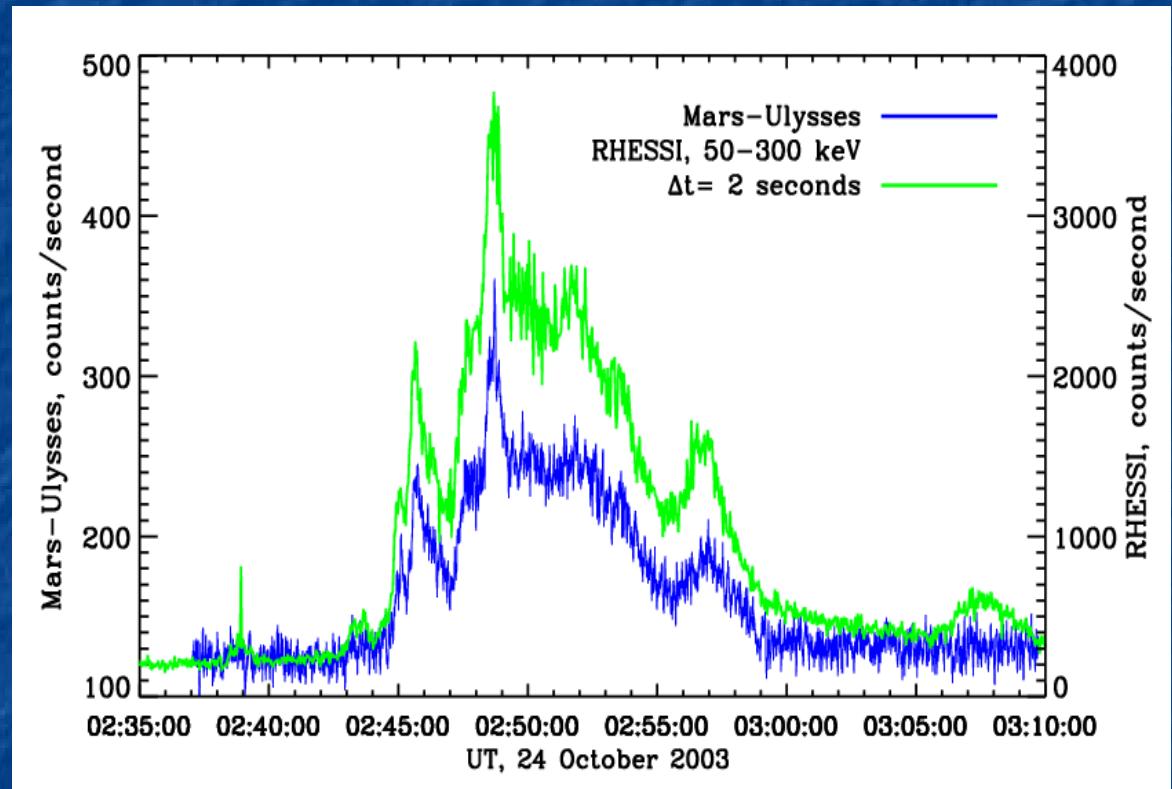

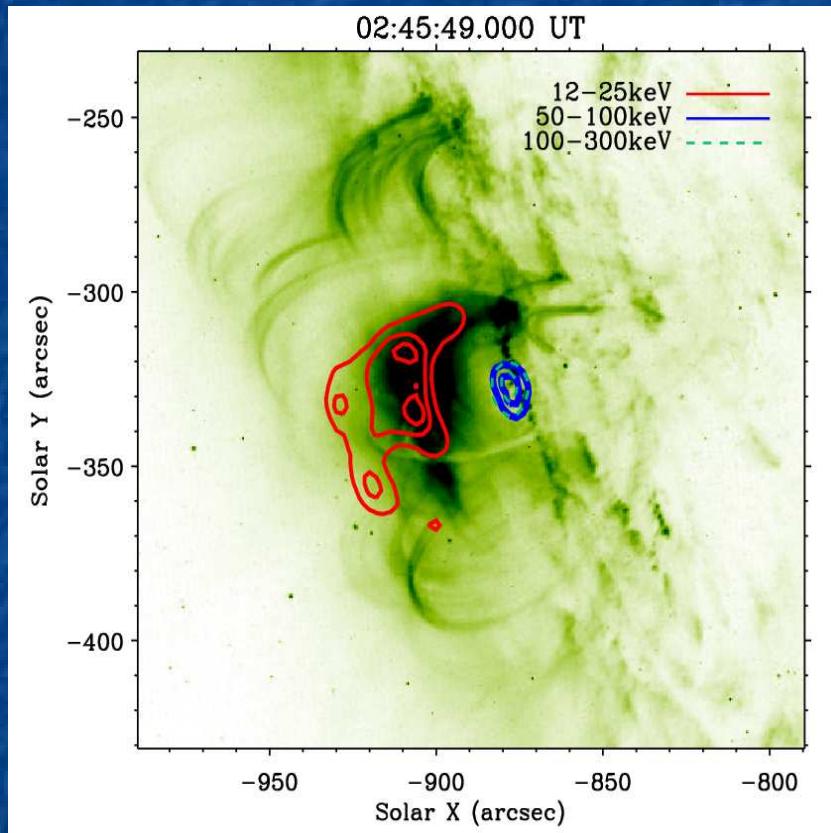

Importance $\times 5.4$

Location S21/E88

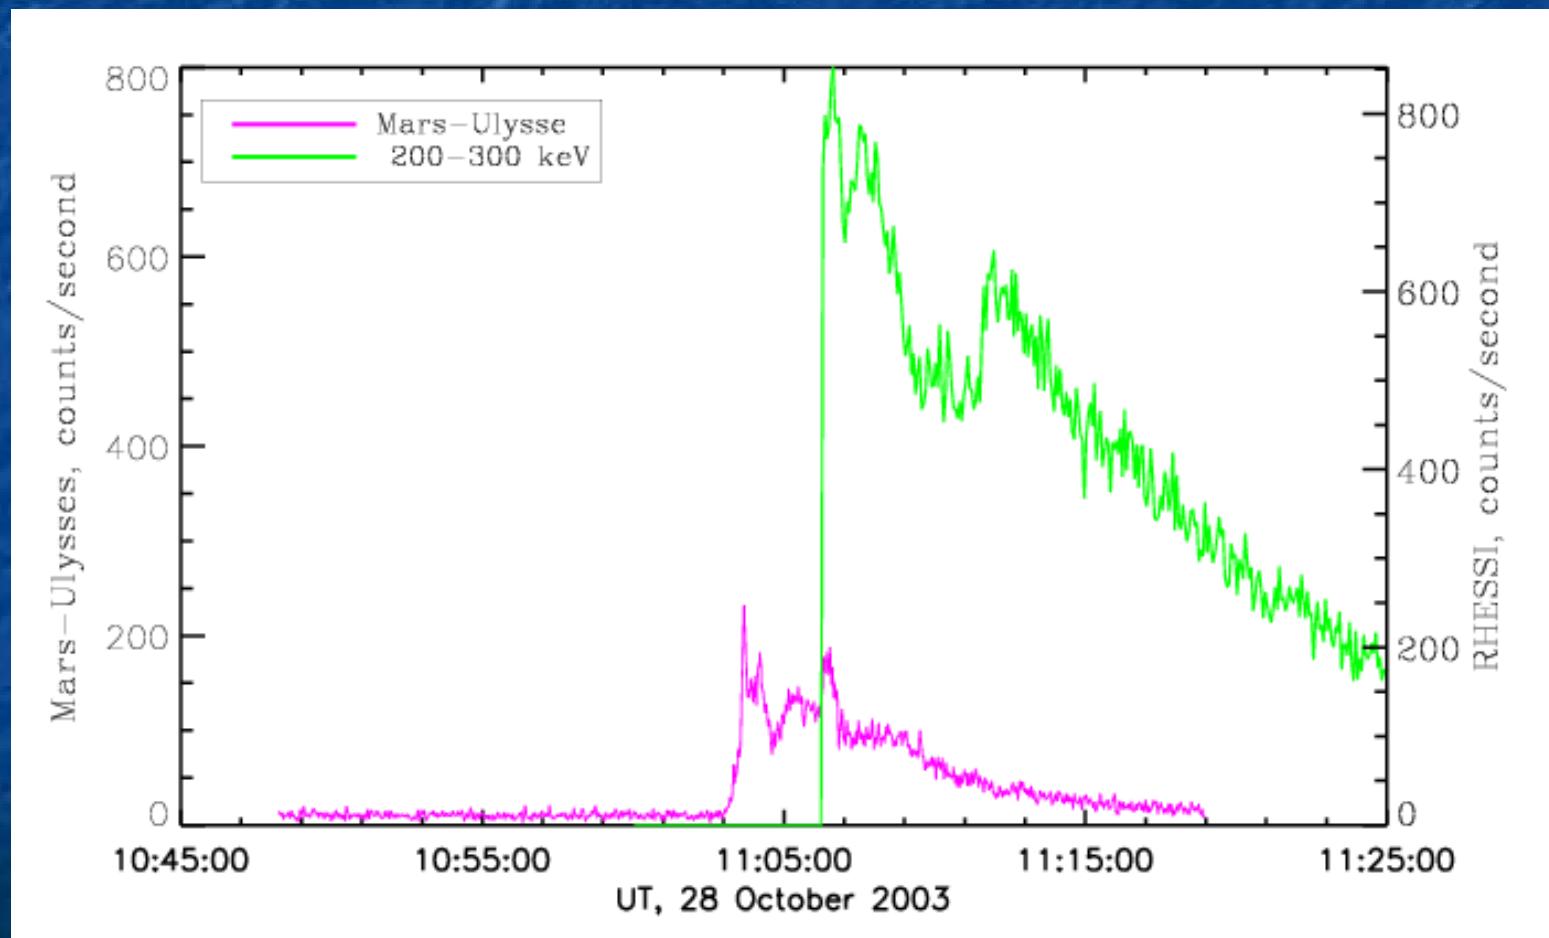

Time 8:19–8:35–8:49

*L.K. Kashapova, M.A. Livshits,
Astronomy Reports, 2008*

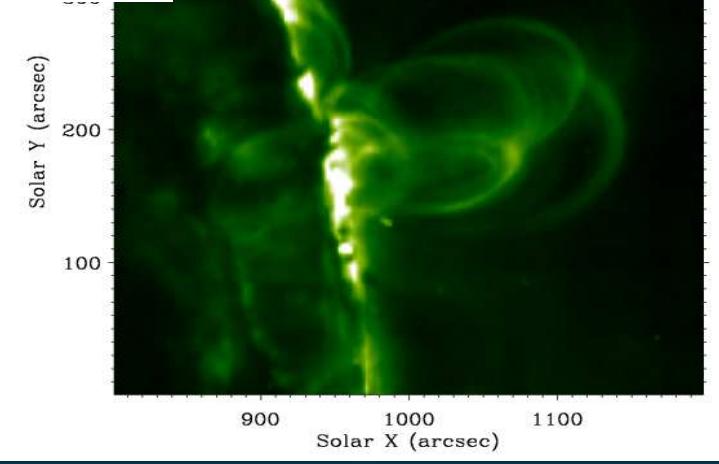

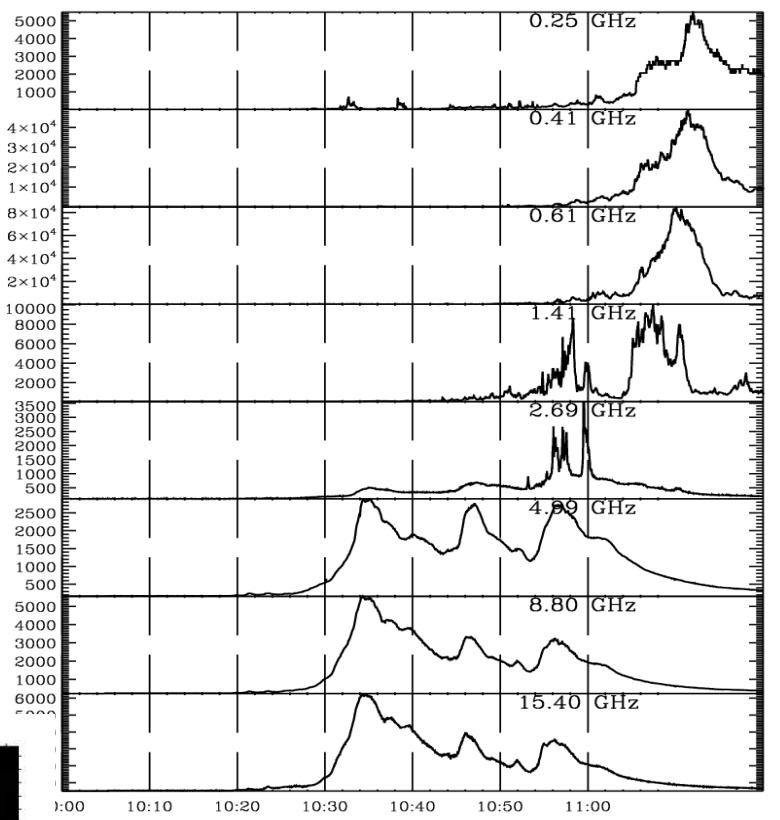

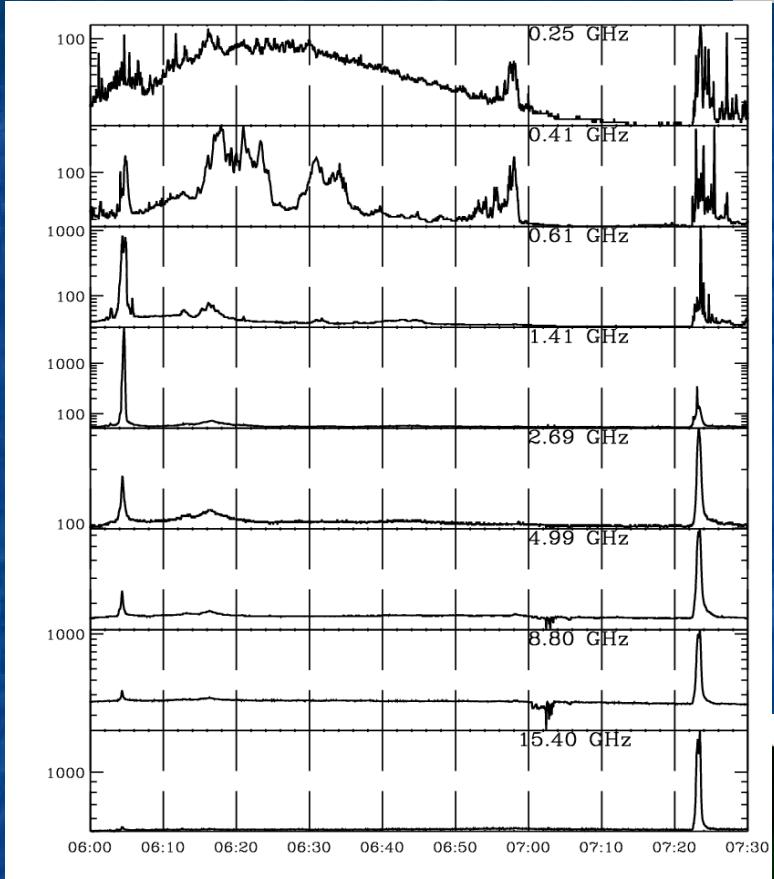

24 October 2003 solar flare (M7.6)

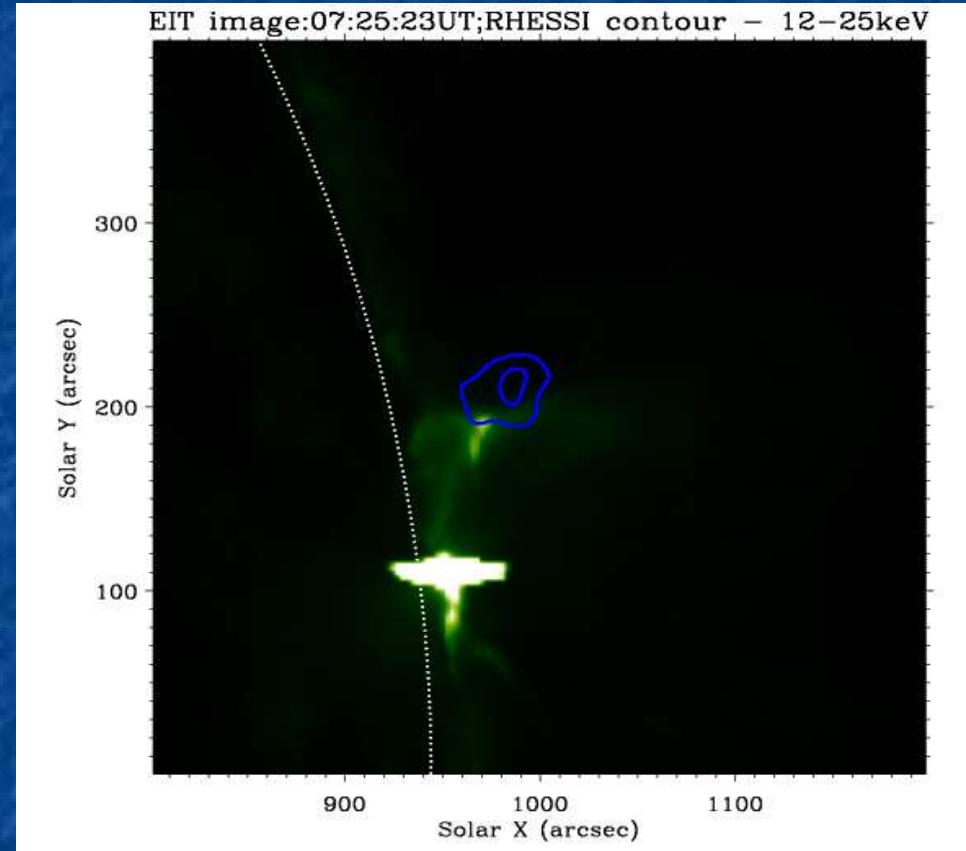

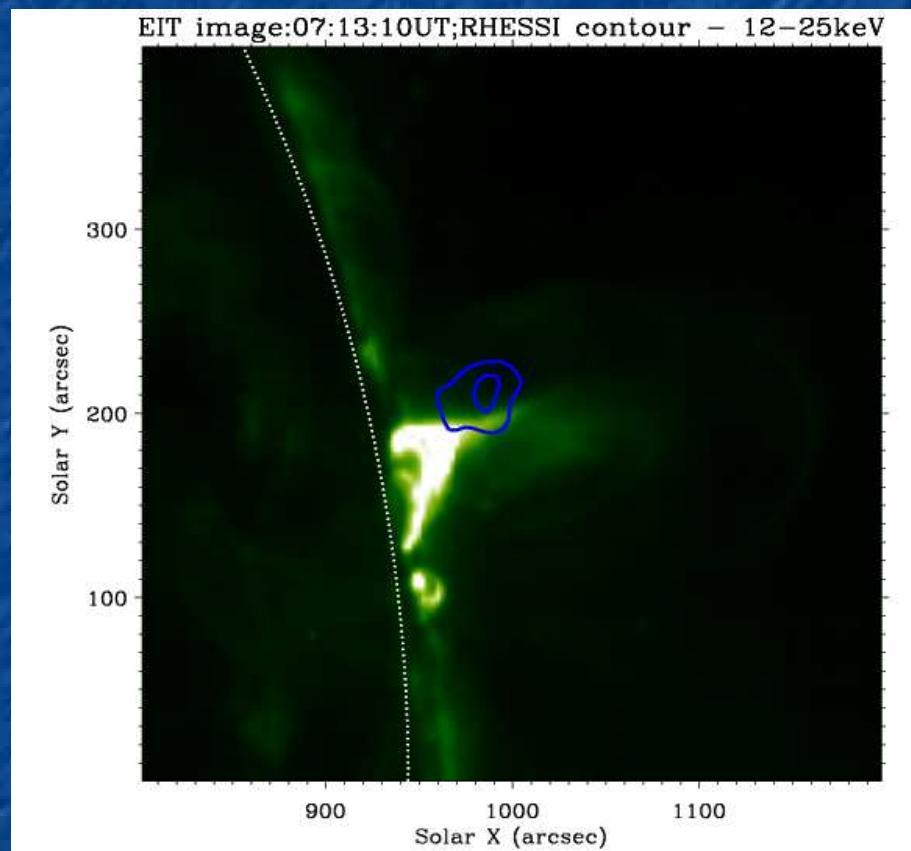

28 October 2003 solar flare

14 July 2005 solar flares *(AR 10786)*

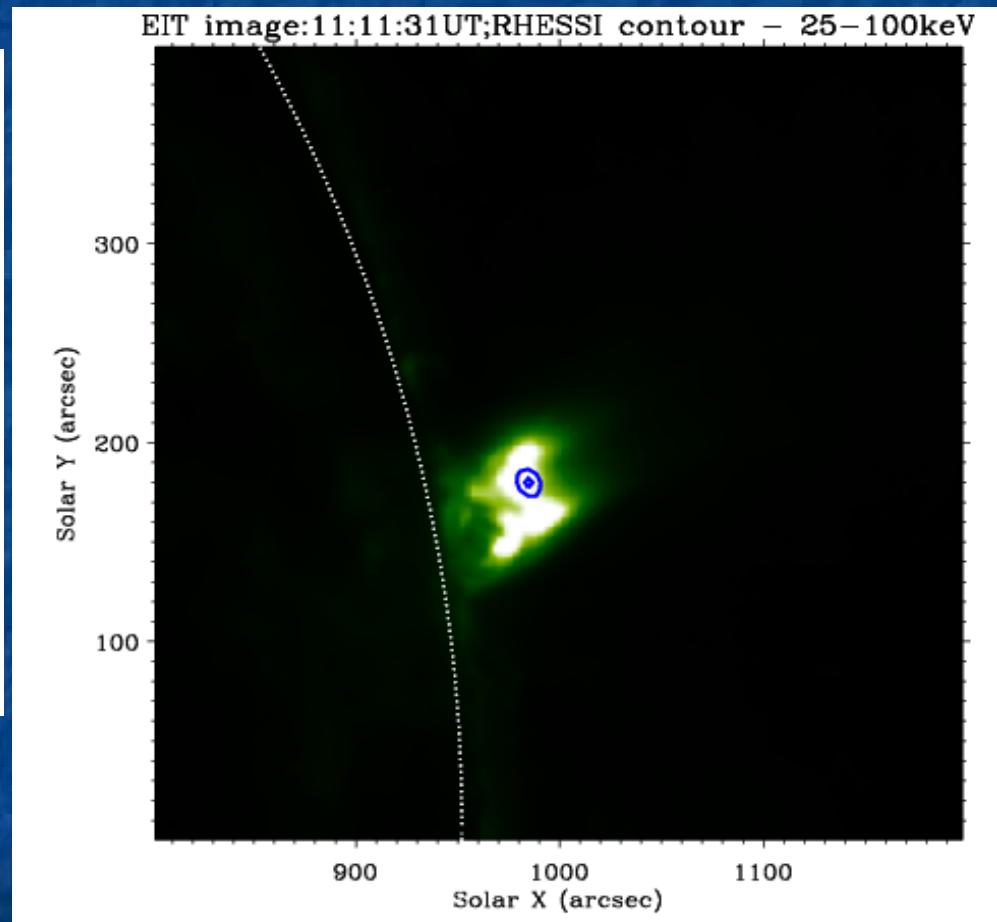

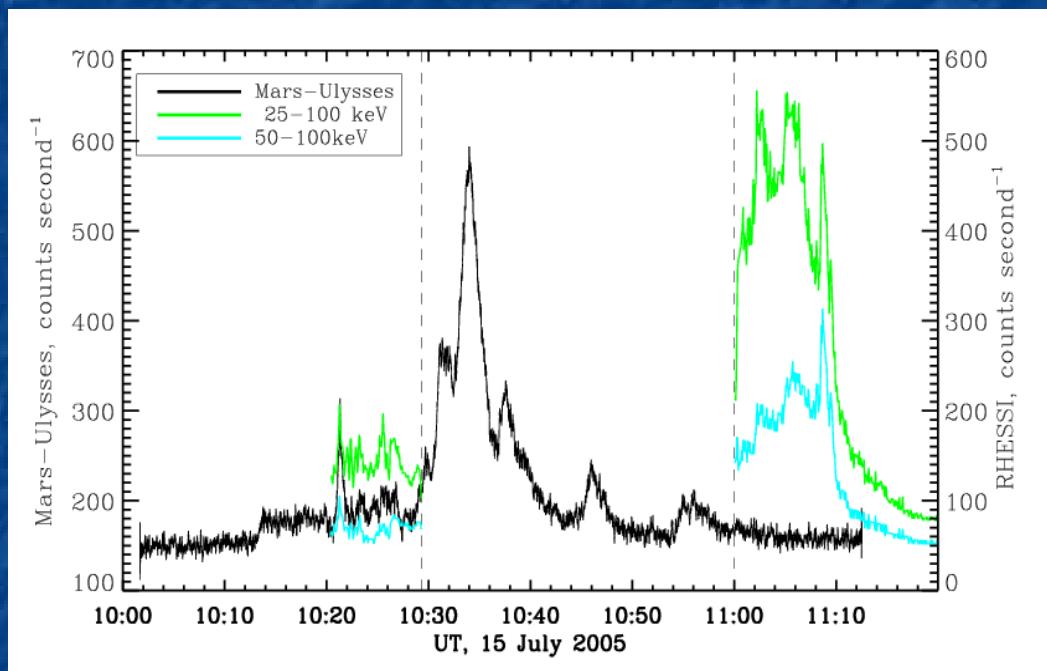

14 July 2005 solar flare

*V.A. Chernetsky, M.A. Livshits, L.K. Kashapova,
Astronomy Reports, in preparation*

14 July 2005 solar flare

- Can we get some more new or interesting information ?? - YES!!
- Problems – images and/or location (if RHESSI data are absent)
